

Rename Files

Simplify the process of renaming files within your CAD environment.

What Does it Do?

The Rename Files add-in is designed to simplify the process of renaming files within your CAD environment. Instead of manually renaming files one by one, this add-in provides a more efficient and automated way to rename multiple files simultaneously.

Users can configure naming conventions, such as adding prefixes and suffixes or using custom formats, and then apply these changes to a batch of files. This helps to maintain consistency in file naming, improve organization, and save time compared to manual renaming.

Key Features

Batched Renaming

Save time and effort by renaming multiple files all at once directly in the SOLIDWORKS interface, boosting productivity within your CAD workflow.

Configurable Naming Conventions

Customize naming conventions according to your preferences. Add prefixes, suffixes, or use custom formats to tailor file names to your specific needs.

Benefits

Minimize Errors

- Minimizes the risk of errors associated with manual file renaming.

Improved Organization

- Facilitates better organization of project files, making it easier to locate and manage data within the SOLIDWORKS environment.
